You've waited long enough — it's time to break free

Copado's complexity isn't worth the struggle. Gearset makes it easy
to move on, with a cleaner pipeline and zero regrets.
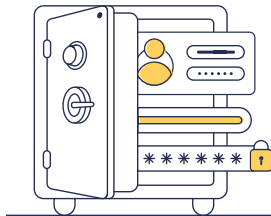

Guided sandbox refresh

Refreshing your sandboxes will make the switch easier, but it's not vital. You can get started with Gearset using your existing orgs, and if your environments need syncing, our comparison and deployment tool can help.

Break away from MDAPI format — with our help

SFDX Source Format is recommended, but many teams still use MDAPI format — especially those coming from Copado. Gearset defaults to source format, and we will make the transition easy.
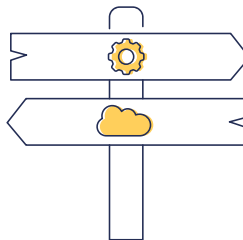

No need to start from scratch

A clean repo can simplify things, especially if your current setup has drifted over time. But if you want to keep your existing repo, we'll advise how you can clean up branches, sync commits, and archive what you no longer need — whatever works best for your team.

ALM tools? We integrate with your existing tech stack

Gearset works seamlessly with Jira, Azure DevOps, and major Git platforms like GitHub, GitLab, and Bitbucket — so your workflow stays connected.

Need granular control? We've got you covered

If you already have permissions and quality gates set up, we'll help you recreate them in Gearset. Starting fresh? Gearset makes it easy to set up robust controls with a user-friendly interface.

Minimal downtime with maximum impact

Switching tools is quick and straightforward. Most teams flip the switch with minimal disruption, and if you need zero downtime, we'll help plan around it.

Full support at every step of the way

Depending on contract size, you'll get a dedicated onboarding manager — at no extra cost. Our DevOps Architects are also on hand to help larger teams. From setup to rollout, we'll make your move to Gearset as simple as possible.

Trapped in a Copado contract? Let's talk

Most teams want to make the move to Gearset earlier than their Copado renewal date. We do this all the time. Chat with us to explore your options and we'll help you make the move.
