

STATE OF SALESFORCE DEVOPS 2025

Why **consolidate** your DevOps toolstack?

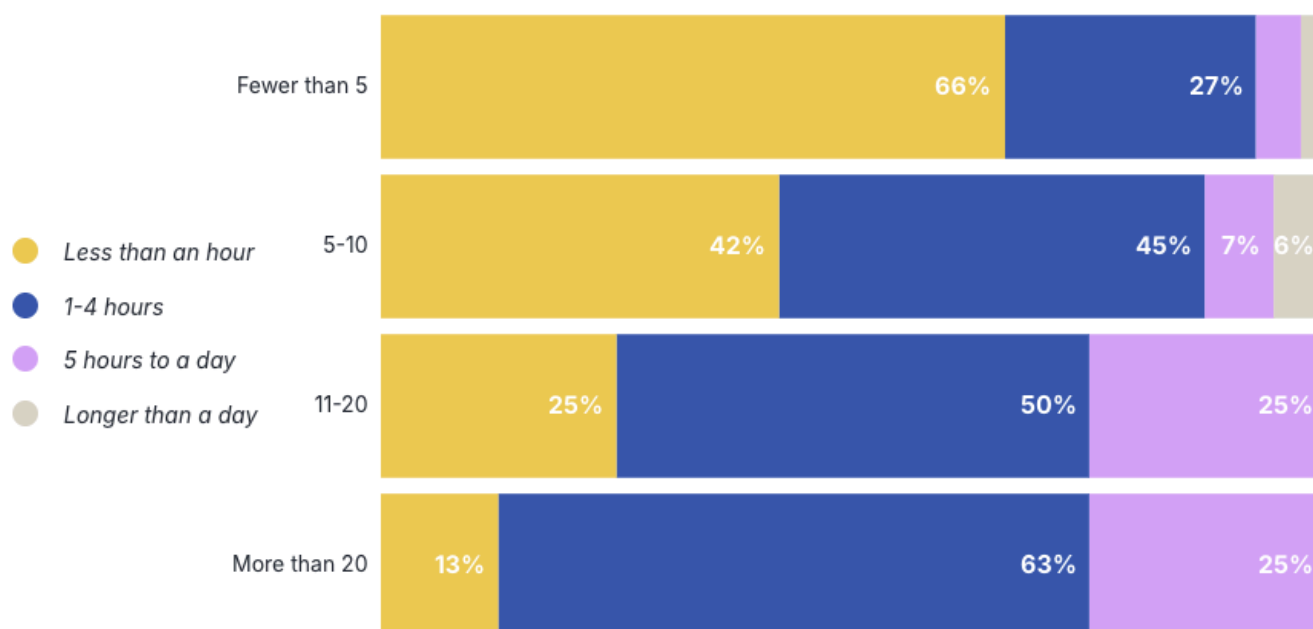

The 2025 State of Salesforce DevOps Report explored the impact of toolstack size on DevOps performance — here are the results:

Juggling tools is slowing you down

A survey of Salesforce teams across the ecosystem revealed a strong correlation between performance metrics and toolstack size: **the more tools teams used across their DevOps lifecycle, the worse their performance** against DORA metrics and other key indicators.

Teams who've consolidated their tooling are 5x more likely to deploy in under an hour and 5x less likely to need a whole day to deploy when compared to teams using the largest number of deployment tools.

Deployment time vs number of DevOps tools used

Teams with a consolidated toolstack also **shipped fewer bugs, reported fewer metadata and data incidents, and recovered faster** — regardless of team size.

**Enable your team to work more effectively
by bringing your entire DevOps lifecycle under one roof**
