

# Gearset versus change sets

	<b>Easy comparisons</b> Our unique line-by-line diff viewer lets you easily compare your different environments side-by-side through either an XML, object or table display	X	✓
	<b>Custom metadata filters</b> Create and save your own customized metadata filters for fast, focused and reusable comparisons	X	✓
	<b>Advanced dependency analysis</b> Gearset automatically identifies and suggests which dependencies to include in your deployment packages, ensuring more successful deployments	X	✓
	<b>Version control</b> Full support for any git-based source control system lets you easily move metadata between repositories and your orgs	X	✓
	<b>Complete deployment history</b> View a full history of your deployments across all your orgs and download pdf reports to share with team members for a complete audit trail	X	✓
	<b>Deployment rollback</b> Easily revert unwanted changes with full or partial rollback	X	✓
	<b>Automated change monitoring</b> Gain better visibility into changes made across your orgs with daily snapshots, change tracking and custom alerts with on-demand metadata backups for peace of mind	X	✓
	<b>Automated testing</b> Catch silent test failures, track changes to your code coverage and debug errors with easy automated testing	X	✓
	<b>Continuous Integration</b> Keep your orgs in sync and enjoy faster release cycles by creating easy, customizable CI jobs in just a few clicks	X	✓
	<b>Team collaboration</b> Experience greater visibility and control through setting team permission levels, delegating access to orgs, shared deployment history and collaborating on building deployment packages	X	✓
