Gearset achieves HIPAA compliance

Cambridge, UK — February 29, 2024 — Gearset, the leading Salesforce DevOps platform, today announced Health Insurance Portability and Accountability Act (HIPAA) compliance for all its solutions. This certification highlights Gearset’s ongoing commitment to ensuring the security and privacy of its users’ data.

Customers storing protected health information (PHI) can now make use of Gearset’s platform and receive a Business Associate Agreement (BAA) to ensure proper handling of protected data. Customers handling PHI will have their data stored on a dedicated Amazon Web Services instance and access to SAML and BYOK if needed. This will support organizations in maintaining compliance standards and avoiding the financial penalties or corrective action plans that come from a breach.

“We built Gearset’s platform with the security of our users and their data in mind,” said Kevin Boyle, CEO of Gearset. “HIPAA compliance allows us to provide that same level of protection to US customers processing PHI.”

HIPAA compliance is the latest addition to [Gearset’s enterprise-grade security offering](#), including ISO 27001 certification, CCPA/CPRA compliant, GDPR compliant, and advanced SSL data encryption.

Gearset not only secures user’s data, but encourages them to secure their own Salesforce development through advanced [testing](#) and [backup](#) solutions. This has seen over 70 billion Salesforce data records backed up by Gearset, and over 3.5 billion unit tests run on the platform.

Note to the editor

Gearset's compliance team and data engineers are available for interview on request.

About Gearset

[Gearset](#) is the leading Salesforce DevOps platform, with powerful solutions for metadata and CPQ deployments, CI/CD, automated testing, sandbox seeding and backups. It helps Salesforce teams apply DevOps best practices to their development and release process, so they can rapidly and securely deliver higher-quality projects.

Thousands of Salesforce professionals use Gearset, and have shipped millions of deployments, run billions of automated tests, and backed up billions of records. With inbuilt intelligence that solves the fundamental challenges of Salesforce DevOps, Gearset is a uniquely reliable solution trusted by more than 2000 companies, including McKesson, Accenture and IBM.
