

# Salesforce consultancy Color Consultancy use Gearset to **deliver more for their clients**

## color

Color Consultancy is a leading Salesforce consultancy, providing solutions to accelerate clients' growth.

**Size** 60+ people

**Location** UK

**Industry** Consultancy

**Customer since** 2014

### Color Consultancy replaced change sets with Gearset

Color Consultancy deliver Salesforce solutions to clients across a range of industries, and so often deploy to clients' orgs. Rather than using change sets, Simon Edwards, Salesforce and Business Consultant, wanted Color to use a powerful comparison and deployment tool.

"In change sets you have to choose each component one by one, which is incredibly tedious. When a change set goes wrong, you don't always really understand why. So it's easy to lose four or five hours of development time unpicking it."

With Gearset, deployments are easier and faster. Gearset's org comparisons also provide much needed insight into the structure of clients' orgs. For Salesforce Consultant, Will Roberts, going back to changes sets just isn't an option: "I think I'd pull my hair out if we still used change sets!"

### Gearset provides Color Consultancy with the tools they need to deliver more for their clients

Color have taken full advantage of everything Gearset has to offer. They often use Gearset to deploy data as well as metadata. And Gearset's change monitoring makes it easy for the team to support clients. "We can spot disasters coming and spot potential issues cropping up ahead of time, which is really great," says Simon.

With a range of powerful DevOps tools at their fingertips, the Color Consultancy team are now a world away from the misery of change sets. Simon has seen the transformation:

"I go back long enough to know the full pain and suffering of change sets. Since adopting Gearset, we've removed all those issues from our release management process."
