

Salesforce consultancy Red Argyle uses Gearset for quick and reliable deployments

Red Argyle switched to Gearset and left behind the tedium of change sets

Founded in 2010, Red Argyle has delivered some 1,200 Salesforce projects, ranging from quick-start implementations through to custom development and integrations. Originally, the team used the Force.com IDE and change sets for deployments, but using these tools proved slow and error-prone.

Red Argyle solved their deployment problems by switching to Gearset in 2015. From the get go, Red Argyle were able to deploy faster and more reliably using Gearset. Director of Configuration Alex Maroselli recalls her first impression of Gearset: *“Where has this been all my life!? Change sets are so tedious, and it’s very easy to forget key pieces.”*

RED ARGYLE

Red Argyle is a US-based Salesforce consultancy, helping its clients to implement and extend Salesforce.

13,485
CI job runs

“As a company, we’re dependent on Gearset - it’s ingrained in our processes.”

Red Argyle builds robust deployment processes around Gearset’s functionality

Using Gearset’s integration with source control, Red Argyle brought together its configurators and developers into one unified process. Clients’ orgs and requirements are always different, but Red Argyle’s fundamental process stays consistent with Gearset. According to Founder and CTO Tom Patros, *“Gearset has given us a tool and a behaviour to align to. Everybody knows that you’re going to go to Gearset and you’re going to get stuff into source control or you’re going to get stuff out of source control.”*

One of Red Argyle’s developers, Dan Schmitt, summed up Gearset’s value: *“I recommend Gearset 110%. It will speed up your workflow. It will save you money overall. It’s just a great tool to use!”*
