

Sutter Health's Salesforce deployments are 8x faster with Gearset than they were with change sets

Sutter Health saved time and resource by using Gearset for their Salesforce deployments

The Salesforce team at Sutter Health develop and maintain two production orgs that support three business lines and two large communities of end users. Five admins and fifteen developers deploy changes through testing and staging environments, but deployments to production are limited to tight release windows during scheduled downtime.

Using change sets proved to be a drain on the team's time, diverting resources away from development and support. Gearset was recommended to Sutter Health by their Salesforce implementation partner as a solution to their deployment problems. Program Manager, Nadia Mayard, was amazed how time the team saved straight away.

"Being able to quantify the time saving - what used to take 8 hours, now takes less than an hour with Gearset - that's huge, and it really speaks for itself."

Sutter Health is a not-for-profit health system focused on community and high-quality, personalized care.

Gearset simplified Salesforce releases for Sutter Health

Gearset makes life easier for the Sutter Health team. Rapid comparisons and deployments in one simple workflow, without complex manual steps, are a huge contrast to change sets. Deployments can also be scheduled with Gearset, so no one has to be working under pressure during a tight release window anymore.

"We've had great success using Gearset to move changes from one environment to another," says Nadia. The team have set up Gearset's change monitoring tool as well, so that they can know how their orgs are changing. In short, release management is no longer a headache, and so the team have been freed up to spend their time delivering a better experience to their end users.

The time saving with Gearset was extraordinary. We have nothing but good things to say!
