The search for a deployment solution

WEKA were looking to move away from painful, manual deployments with Change Sets. Once they began a free trial of Gearset, their team realized that it gave far more visibility over the entire process. By showing a side-by-side comparison of all changed, new and deleted items in your source and target orgs, Gearset gives WEKA clarity and enables them to build a deployment package in just a couple of clicks.

Katia Gleber, Business Applications Manager at WEKA, found that Gearset's Change Monitoring capabilities are like a 'snapshot', giving *"complete visibility of the differences between two orgs and much more control."*

Gearset killed two birds with one stone!

At the same time, WEKA had just implemented CPQ and were looking to move away from using Salesforce's Data Loader. Katia was impressed with Gearset's latest CPQ release method and realized they had chosen the right solution for their Salesforce needs: *"We had to deliver some urgent tasks. Thanks to Gearset, I could deploy CPQ data in 5 minutes and move on to focus on more important tasks!"*

Whereas CPQ sandbox data seeding used to be a manual process, *"with Gearset, it's just the click of a button! I don't need to export data or establish any connections anymore, so now it just takes me a few minutes,"* explained Katia. *"The process is intuitive, efficient, and saves tons of time!"*

The ability to handle all Salesforce deployments with one solution

Weka was looking for a platform to answer both release management requirements and CPQ deployments — they found both in Gearset!

Results

Scalable and "will support development processes in the future"

Efficient deployments that can be configured and executed with ease

CPQ deployments that are as easy as metadata

Change monitoring features give "confidence" to always know what's happening

*"We chose Gearset to support us with our deployments and CPQ, and it has made our work **so efficient, accurate and easy!**"*

Katia Gleber, Business Applications Manager, WEKA
